### EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with STEVEN on March 31, 2006.

Claims 1-3 are amended as follows.

Claim 1, An optical disk reproducer; comprising read-out means for reading out, from an optical disk having presentation and navigation data recorded thereon, ~~the recorded data~~, a memory storing the data read-out means, and decoding means the data stored in the memory in a predetermined unit; for performing reproduction based on the presentation data, comprising

number-of-sectors detection means for detecting the number sectors which are the navigation data included data the predetermined stored in said memory; and control means for suspending, when the number of sectors detected by the number-of-sectors detection means larger than a predetermined value, an operation for storing in said memory data in the subsequent predetermined unit.

Claim 2, The optical disk reproducer according to claim 1, characterized in that said control means suspends the read-out from the optical disk by the read-out means and back-jumps track position on the optical disk; to suspend ~~an~~ the operation for storing in said memory the data in the predetermined unit.

Claim 3, The optical disk reproducer according to claim 1, wherein

said decoding means comprises navigation sector detection means for detecting the navigation data included in the data the predetermined unit stored in said memory, to specify which of sectors is the navigation data, and

said number-of-sectors detection means counts the number of sectors which are the navigation data specified by said navigation sector detection means.

### **REASONS FOR ALLOWANCE**

2. The following is an examiner's statement of reasons for allowance:

The present invention is directed to a method for synchronizing the playback of a prerecorded program stored in a plurality of playback devices. Independent claim <sup>1</sup>/~~2~~ identifies the uniquely distinct features "control means for suspending, when the number of sectors detected by the number-of-sectors detection means is larger than predetermined value, an operation for storing in said memory data in the subsequent predetermined unit." The closest prior art, Schultz (US PG Pub 2002/0065969), either singularly or in combination, fail to anticipate or render the above underlined limitations obvious.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
